

QUALITY ENGINEERED

## Utility Bodies

### UTILITY...Our First Name For Over 50 Years

“Our 50 years of engineering, design and production experience assures customer satisfaction and continues to provide a standard for the industry.”

To understand why UTB is built better, you must take the body apart, see the understructure, and how the strength is engineered into each piece.

QUALITY ENGINEERED

# Utility Bodies

No detail is too small for UTB. Each component is engineered by UTB and built in our U.S. facility to the highest standards.

- Exclusive UTB fuel bezel eliminates fueling problems.
- UTB engineered latch designed for maximum security and durability. Unmatched 10 year warranty!

Intermediate crossmembers are full width for added strength.

Front panel fully welded and die formed ribs for maximum strength.

Interlocking crossmember unitizes entire body.

Every exposed edge is hemmed for added strength and safety.

Self supporting workbench style double panel tailgate.

Even our standard bodies start out with our crane body understructure.

Interlaced understructure for unmatched strength and lower center of gravity.

1/8" treadplate floor with return flange ties the floor and side packs together.

Three full length 9/16" die radius formed ribs on compartment tops and front panels for added strength.

Full width rear crossmember ties the floor, side packs and understructure together.

Double panel flip top lids for extra safety and strength.

Light holes punched high in body for maximum visibility.

Built in drip rail formed into body; Designed to channel water away and add strength.
